Backend/cloud developer building Java and Spring Boot services and automating AWS infrastructure and CI/CD. Focused on distributed systems, cloud platforms, observability, and reliability.

Skills

Languages: Java, Python, SQL

Backend: Spring Boot, REST APIs, API Design, JUnit, Mockito, Flyway

Cloud & Infrastructure: AWS, Docker, Terraform, Ansible

Databases & Messaging: PostgreSQL, MongoDB, Kafka, ZooKeeper

CI/CD & Tools: GitHub Actions, Jenkins, GitLab CI/CD, Git, Linux, Bash

Experience

Software Developer, Intact Financial Corporation – Montreal, Quebec May 2025 – Present

- Built and maintained Java Spring Boot services delivering client/risk data to **6,000+ insurance brokers**, improving reliability of business-critical workflows
- Developed backend data transformation and mapping logic for complex domain objects, applying validation rules across **hundreds of thousands** of active policies
- Deployed backend services across production and non-production environments, using logs and metrics to troubleshoot failures and reduce support overhead

Software Developer Intern, Sun Life Financial Inc. – Toronto, Ontario Jan. 2025 – Apr. 2025

- Improved infrastructure reliability by enhancing Terraform, Ansible, and Jenkins pipelines and automating AWS resource cleanup with Python.
- Built Docker-based VS Code Dev Containers, cutting local setup time from hours to under 10 minutes and improving onboarding consistency.

Software Developer Intern, Intact Financial Corporation – Montreal, Quebec Sept. 2024 – Dec. 2024

- Developed backend data transformation logic and refactored Java Spring Boot services to improve readability, maintainability, and domain rule handling.

Software Developer Intern, CBC/Radio-Canada – Montreal, Quebec Sept. 2023 – Dec. 2023

- Automated AWS infrastructure provisioning and GitLab CI/CD deployments using Terraform, reducing manual deployment effort.

Projects

SimpleKafka — Kafka-Like Distributed Messaging System | Java 11, Java NIO, ZooKeeper, Maven

- Built and validated a three-broker messaging system with a custom binary protocol, topic/partition metadata, leader-aware routing, and ordered offset-based reads
- Implemented append-only segmented storage using .log and .index files, per-partition offsets, broker restart recovery, ZooKeeper-based controller election, and asynchronous leader-to-follower replication

CloudOps Incident Triage API | Java 21, Spring Boot, PostgreSQL, Docker, Flyway, GitHub Actions

- Built a Spring Boot REST API for incident triage, supporting incident creation, severity tracking, status updates, affected services, and investigation notes
- Designed PostgreSQL persistence with Flyway migrations, DTO validation, indexed fields, and structured API error handling
- Added Docker Compose for local PostgreSQL setup and GitHub Actions CI for automated build validation

Education

Concordia University – Bachelor of Science in Computer Science

Oct. 2025
